## EXPERIENCE

**2023**

### ALX FULL STACK SOFTWARE ENGINEER PROGRAMME

#### CODE REVIEWER

- In 2023, I achieved the role of a Code Reviewer under the **ALX Full Stack Software Engineer** program where I was sponsored by MasterCard. This opportunity arose after I was nominated by my esteemed technical mentors. While in this role, I had the privilege to not only mentor junior cohorts of engineers but also conduct comprehensive reviews of their foundational portfolio projects. My primary objective was to ensure that these projects aligned with industry standards.

**2023**

### ALX FULL STACK SOFTWARE ENGINEER PROGRAMME

#### PORTFOLIO PROJECT– TASK PILOT

- Upon completing my foundation program, my partner and I designed and launched a project management application called TaskPilot ( <http://taskpilot.me>). This project was developed using a range of tools, including Flask, React, MySQL, Nginx, and Unicorn, among other technologies. I took full responsibility for developing the frontend of the application and played a significant role in the backend development as well.

**2021 TO PRESENT**

#### VOLUNTEER MENTORSHIP

- Since 2021 and continuing to the present day, I have been wholeheartedly committed to mentoring individuals who are new to the field of technology, both within my local community and online. My focus has particularly been on frontend technologies, such as HTML, CSS, JavaScript, and React, alongside various backend technologies. Engaging in this mentorship role has not only brought me immense joy but has also significantly strengthened my knowledge in these domains.

## SKILLS

### Languages & Frameworks

- Python (Flask, FastApi)
- Javascript - Node (React, Express)
- C
- CSS (BootStrap, Tailwind)
- Bash

## **Database Management & Storage**
